

Reliability and security evaluation of a closed-loop MLOps stack

Companion to JSSOFTWARE-D-26-02282 · Compose snapshot · measured, not estimated

Reliability (n=5 faults)

Backend kill: no self-heal

Manual start 3.69 ± 1.09 s

MLflow / MinIO: hang ≥ 30 s

Rollback restored prior champion

Security (scan + STRIDE)

86 OSV advisories / 18 pins

10 credential / port findings

5 of 7 High STRIDE boundaries

Silent MLflow fail confirmed live

A/B/C (9 live runs)

C / A detect in seconds

B waits avg 3.5 scheduled days

Gate rejected 9/9 on recall

C never auto-fired (GOOD eval)
